

Dear customer,

We are proud to present to you our business unit: Talenco Transformer Department.

Talenco Transformer Department is founded by Talenco CEO Jens Hendrickx and a team with vast experience within the transformer industry.

The bankruptcy of transformer manufacturer CG Belgium ensured an unique opportunity. We are aware that transformer services are in high demand, the main focus of this department is therefore on service activities, which includes repairs, maintenance, commissioning and sales of transformers as well as transformer spare and auxiliary parts.

Continuous transformer operations are essential to guarantee your business activities and success. Preventive maintenance is therefore an absolute necessity and the only way to maximize the lifetime of your transformer.

Besides maintenance the Talenco Transformer Business Unit is also specialized in diagnostics, performing repairs and refurbishments as well as oil treatments, on- and off site.

Furthermore we provide erection and commissioning activities for new transformers and this for all brands within the transformer business.

In all these activities we set and pursue the highest standards for a qualitative and flexible service delivery.

Our transformer engineers, technicians and project management teams with more than 25 years experience in these activities ensure our customer the maximum quality be that, onshore and offshore.

The service and quality that your transformer deserves!
